

Aircraft Noise and Operations Monitoring

The Sacramento County Airport System Aircraft Noise and Operations Monitoring System is a comprehensive system providing actual measurement of aircraft noise levels in Sacramento area neighborhoods and suburban communities. The integrated system has many components, including portable noise monitors that measure the noise environment and a system directly connected to the FAA's air traffic control radar that collects aircraft flight tracks. Millions of data points are recorded and stored by the system each day.

Information gathered from local residents about aircraft noise is also entered into the system. This information is then analyzed by a central computer that helps the Sacramento County Airport System to better manage its airport noise mitigation programs. The Airport Noise Information Office uses this data to work with the FAA, aircraft operators and communities to reduce noise impacts on residential communities.

Executive Airport Noise Abatement Procedures

Executive Airport is located near a quiet residential community. To be a good neighbor, the Sacramento County Airport System implemented the following noise abatement procedures:

ALWAYS

- Airport use is restricted to aircraft with FAA certified takeoff noise levels of 84 EPNdB or less
- Traffic Pattern altitude is 1,024 feet MSL; 1,524 MSL for turbine-powered aircraft and large aircraft.

WHENEVER POSSIBLE

- On departure, climb straight out to at least 600 ft. MSL unless otherwise cleared by ATC or for flight safety
- Jet aircraft will use runway 02/20 unless otherwise directed by ATC or for flight safety.

NEVER

The following activities are prohibited.

- Touch-and-go operations between 2100 and 0600 local time
- Practice Instrument approaches between 2100 and 0600 local time
- Midfield or intersection takeoffs
- Formation landings and takeoffs.

SAFETY FIRST!

Web Accessible Flight Tracking System

Sacramento County Airport System has made area aircraft flight tracks accessible via the World Wide Web at:

www.sacramentotracks.com

The site includes specific radar flight track information about flights from Sacramento International, Executive and Mather Airports as well as from smaller general aviation airports in the area. The information displayed is updated three times daily and includes flight number, aircraft type, altitude and groundspeed.
